TEACHING

My teaching covers classes in social inequality and quantitative methods. At the undergraduate level, I teach five classes in the Social Studies program at Roskilde University in three different courses. These classes address social inequality in parenting, daycare, education, and income, and the interplay between genetics and the social environment. At the graduate level, I teach an advanced quantitative methods class for social science master's students at Roskilde University. Focusing on how to employ regression models analytically, this course teaches students how to use directed acyclic diagrams and advanced regression techniques such as fixed effects regression and multi-level regression. I supervise student projects in the bachelor's program in social studies, the master's program in social, and the master's thesis at social studies at Roskilde University.
